

Unified Atlassian Login with OAuth SSO

Securing Authentication

☑ Use Cases

☑ Features

☑ Why Us

mO OAuth/OpenID Connect (OIDC) for Atlassian Suite

For enterprises using Atlassian Suite DC and Cloud and its suite of applications (Confluence, Bitbucket, Bamboo, Fisheye), the challenge of managing multiple logins and passwords can be particularly daunting. These may lead to security vulnerabilities, operational inefficiencies, and user frustration.

miniOrange's Single Sign-On (SSO) via OAuth/OpenID for Atlassian Suite DC and Cloud is a powerful solution that enables secure, seamless access to Atlassian Suite DC and Cloud and other applications using a single set of login credentials. Whether your users are in Azure, Okta, or another identity provider, miniOrange SSO allows them to log in securely using their existing credentials.

61%

of organizations experience a decrease in IT support tickets related to password resets and access issues after implementing SSO.¹

Use Cases – Where miniOrange SSO Delivers Impact

Unified Login Across Multiple Identity Providers

Employees, contractors, and partners can all sign in using the same secure process, no matter which provider they use, whether it's Okta, Entra ID, or miniOrange. This makes the login experience smooth and easy for everyone, helping them access the tools they need without confusion.

Smart User Redirection to the Right Identity Provider

Users don't have to figure out which provider to use to log in. Based on their email, group, or where they work, the system automatically sends them to the correct login page. This makes signing in faster and less confusing, especially for large teams with different types of users.

Access Control Based on User Roles

Each user can be placed into a role or group that decides what they can see and do in tools like Jira or Confluence. This makes sure they only get access to what they need, helping protect important information and making it easier for them to focus on their work.

Instant User Setup with Just-in-Time Provisioning

When someone logs in for the first time, their account is created right away, and they are added to the right groups with the right permissions. There’s no need for someone from IT to do it manually. This saves time and helps new users start working right away.

Reduced Administrative Effort

With automatic group assignments and access controls, IT teams don’t need to spend as much time managing user accounts. This means they can focus on more important projects while still keeping everything secure and up to date

Key Features: Secure, Seamless, and Scalable Authentication

Just-In-Time User Provisioning	Automatically create users on-the-fly during their first login, reducing manual user management efforts. Ensure seamless onboarding for new users without requiring pre-registration in the system.
Multiple Identity Provider Support	Integrate with popular identity providers like Active Directory, Okta, Auth0, and more.
User Profile and Group Mapping	Sync user profiles and group information from your identity provider to Atlassian Suite Cloud. Automatically assign users to appropriate groups and roles based on their identity provider data.
Custom Redirect After Login	Redirect users to a specific page or application after successful login. Enhance user experience by guiding users directly to their most frequently used tools.
OpenID Single Logout	Enable single logout functionality to log users out of all applications with one click. Improve security by ensuring users are fully logged out of all systems when they end their session.
Force Authentication with Providers	Require users to authenticate via the configured identity provider for every login. Enhance security by ensuring users cannot bypass the SSO process.

Maximizing Security and Productivity with miniOrange SSO

Boost Productivity

Employees and end-users can access all their enterprise applications with a single set of credentials, eliminating the need to remember and manage multiple passwords.

Auto User Management

Automates user provisioning, eliminating manual onboarding efforts. Additionally, it ensures users are assigned correct roles and access permissions instantly.

Efficient IT Costs

Minimize password reset requests and access-related support tickets, freeing up IT resources for more strategic tasks.

Scale as You Grow

miniOrange’s cloud-based architecture allows you to scale effortlessly as your organization grows.

Pay As You Go

Customize your subscription plan to meet your organization’s specific needs, ensuring cost-effectiveness and scalability.

Trusted by Leading Enterprises for Secure Access

About Us

miniOrange’s security experts are trusted by 25,000+ organizations across the world. Standing at the forefront of Atlassian security, we deliver Single Sign-On (SSO), Multi-Factor Authentication (MFA), and User Management solutions. Be it Data Center or Cloud, our apps secure Atlassian with seamless SAML and OAuth integration for ease of use and top-tier security.
