Why Us

Secure Share for Jira and Confluence External Users

Migrating to the cloud with a high user count can often raise concerns, such as license costs and ensuring secure content sharing. miniOrange's Secure Share plugin offers a seamless solution to these challenges. With this multi-featured tool, you can effortlessly share your Confluence and Jira content with external, unlicensed users. All while maintaining full control over security and access.

Granular permissions, controlled access, and password-protected links let you share information securely. Simplify the way you share, collaborate, and protect your content, all while keeping license costs in check.

Savings with mO's Secure Share

Pay for licensed users, Share with unlimited unlicensed users!

20% annual price increases can occur for Atlassian Cloud products like Confluence and Jira. 1

Why Choose miniOrange Secure Share for Secure Collaboration

Share Multiple Spaces, Effortlessly

Support collaboration at scale by sharing access across multiple Confluence spaces or Jira projects at once. Whether managing enterprise-level documentation or multi-team projects, External Share allows you to securely distribute content from various sources in a centralized and efficient way.

Real-Time Updates for All Stakeholders

Ensure everyone stays aligned with the latest project developments. The subscribe feature allows unlicensed users to receive real-time notifications whenever there are changes to shared issues or pages, fostering transparency and enabling faster decision-making.

Seamless Cross-Department Collaboration

Simplify collaboration across teams and departments, even when working across different Jira instances. Share Jira issues, boards, and Confluence pages effortlessly, enabling efficient teamwork and accelerating project timelines without unnecessary friction.

Cut Costs, Simplify Sharing

Eliminate the need for additional licenses or account setups when sharing Jira issues and Confluence content with external users. This not only reduces costs but also streamlines the sharing process, making it easier to collaborate with customers and partners.

Granular Control for Secure Sharing

Maintain control over what external users can access by defining fine-grained permissions. Whether it's viewing, commenting, accessing attachments, child pages, subtasks, or linked issues, you can ensure that external stakeholders only see what's relevant to them, enhancing security and collaboration.

Solving Real-World Collaboration Challenges

Keep Clients Updated Without Full Jira Access

Consider a software agency needed to keep clients updated on project progress without the overhead of managing Jira accounts for every stakeholder. With Secure Share, they can create secure, view-only links to project boards, allowing clients to check status, etc. These links came with expiration controls, ensuring updates stayed secure and relevant.

Cost-Effective Cloud Migration for Large Enterprises

Suppose a university and a large enterprise migrated to Atlassian Cloud, they faced a major challenge: high licensing costs for thousands of users who only needed to view content. Secure Share offered a simple solution, granting secure, read-only access to external users through shared links. This approach can significantly cut costs while preserving security and allowing users to share multiple spaces.

Secure External Access for Audits

For organizations in highly regulated industries, external audits often mean exposing internal systems to third parties. Secure Share helped streamline this process by offering temporary, restricted access to Jira and Confluence content. Instead of setting up full accounts, teams shared password-protected links with expiration dates, giving auditors just the access they needed.

FEATURES	Jira	Confluence
License-free sharing	Share issues, projects, filters, and boards with external users – no license needed.	Share pages or entire spaces with external users – eliminating the need for a license for every user.
Granular permissions	Define access levels for external users: view and access comments, attachments, subtasks, and linked issues.	Control how external users interact: view and access comments, attachments, and child pages (based on their labels).
Password protection	Secure shared links with passwords to prevent unauthorized access.	Add an extra layer of security with password-protected links (manual or auto-generated).
Expiration dates	Set expiration dates for shared links to ensure time-limited access.	Define link validity periods to automatically revoke access after a set time.
Real-time notifications	Unlicensed users can subscribe to updates and receive notifications for changes.	Allow external users to stay informed with real-time updates on shared pages.
Instant link deactivation	Revoke access instantly by deactivating shared links at any time.	Disable shared links immediately when access is no longer required.
Global Configuration Settings	Project admins can manage granular sharing settings for the entire project, while org admins can configure and enforce these settings across the entire Jira instance.	Admins can define and manage global sharing policies, ensuring consistent and secure collaboration across all spaces and pages.
Custom domain and SMTP sharing	Customize shared links with your domain and send secure links via your SMTP server.	Tailor shared pages with your domain and to be shared securely through your SMTP server.
Auto-deletion of links	Automatically delete shared links after 7 days of link expiry.	Ensure security with automatic link deletion after the expiration period.

Custom branding

Maintain a professional look with custom domains, email setups, favicon, and page layouts.

Secure & Controlled Access to Confluence

Restrict access to Confluence pages for authorized users via SSO and effortlessly manage permissions based on their Identity Provider groups.

Dashboard (Upcoming)

Give external users a dedicated dashboard to easily access all their secure shared links. No more manual tracking or resending. They'll see only the links shared with their Identity Provider group.

Trusted by Industry Leaders Worldwide

About Us

miniOrange's security experts are trusted by 25,000+ organizations across the world. Standing at the forefront of Atlassian security, we deliver Single Sign-On (SSO), Multi-Factor Authentication (MFA), and User Management solutions. Be it Data Center or Cloud, our apps secure Atlassian with seamless SAML and OAuth integration for ease of use and top-tier security.
